| 55 | TABLE 60A: ABOUT 53 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO NORMAL TISSUES  |   |
|    | Table 60A lists about 53 genes upregulated in benign nevi relative to normal tissues. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression. |   |
|    | Pkey:  | Unique Eos probeset identifier number   |
|    | ExAccn:  | Exemplar Accession number, Genbank accession number   |
|    | UnigenelD:   | Unigene number  |
|    | Unigene Title:   | Unigene gene title  |
| 60 | R1:  | average of benign nevi AIs divided by the 90th percentile of normal tissue AIs  |
|    | R2:  | average of benign nevi AIs divided by 90th percentile of normal tissue AIs, where the 15th percentile of normal tissue AIs was subtracted from both the numerator and denominator |

TABLE 60C:

Pkey: Unique number corresponding to an Eos probeset

Ref: Sequence source. The 7 digit numbers in this column are Genbank Identifier (GI) numbers. "Dunham, et al." refers to the publication entitled "The DNA

Strand: Indicates DNA strand from which exons were predicted.

Nt\_position: Indicates nucleotide positions of predicted exons.

| Pkey   | Ref     | Strand | Nt_position                              |

TABLE 61A: ABOUT 72 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO PRIMARY MELANOMAS

Table 61A lists about 72 genes upregulated in benign nevi relative to primary melanomas. Genes were selected from 59680 probesets on the Eos/Arraymatrix Hu03 Genechip array.

Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey: Unique Eos probeset identifier number

ExAccn: Exemplar Accession number, Genbank accession number

UnigenelD: Unigene number

Unigene Title: Unigene gene title

R1 average of benign nevi AIs divided by the 90th percentile of primary melanoma AIs

R2 average of benign nevi AIs divided by the 90th percentile of primary melanoma AIs, where the 15th percentile of normal tissue AIs was subtracted from both the

numerator and denominator

Ref: Sequence source. The 7 digit numbers in this column are Genbank Identifier (GI) numbers. "Dunham, et al." refers to the publication entitled "The DNA sequence of human chromosome 22" Dunham, et al. (1999) Nature 402:489-495.

Strand: Indicates DNA strand from which exons were predicted.

Nt\_position: Indicates nucleotide positions of predicted exons.

TABLE 62A: ABOUT 121 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO NORMAL SKIN

Table 62A lists about 121 genes upregulated in benign nevi relative to normal skin. These genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey: Unique Eos probeset identifier number  
 ExAccn: Exemplar Accession number, Genbank accession number  
 UnigenelD: Unigene number  
 Unigene Title: Unigene gene title  
 R1: average of benign nevi AIs divided by the 90th percentile of normal skin AIs  
 R2: average of benign nevi AIs divided by the 90th percentile of normal skin AIs, where the 15th percentile of normal tissue AIs was subtracted from both the numerator and denominator

TABLE 63A: ABOUT 181 GENES UPREGULATED IN BENIGN NEVI RELATIVE TO MELANOMA METASTASES

Table 63A lists about 181 genes upregulated in benign nevi relative to melanoma metastases. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

Pkey: Unique Eos probeset identifier number  
 ExAccn: Exemplar Accession number, Genbank accession number  
 UnigenelD: Unigene number  
 Unigene Title: Unigene gene title  
 R1: average of benign nevi AIs divided by the 90th percentile of melanoma metastasis AIs  
 R2: average of benign nevi AIs divided by the 90th percentile of melanoma metastasis AIs, where the 15th percentile of normal tissue AIs was subtracted from both the numerator and denominator

TABLE 64A: ABOUT 929 GENES DOWNREGULATED IN PRIMARY MELANOMAS AND/OR MELANOMA METASTASES RELATIVE TO NORMAL SKIN

Table 64A lists about 929 genes downregulated in primary melanomas and/or melanoma metastases relative to normal skin. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

TABLE 65A: ABOUT 838 GENES DOWNREGULATED IN BENIGN NEVI RELATIVE TO NORMAL SKIN

Table 65A lists about 838 genes downregulated in benign nevi relative to normal skin. Genes were selected from 59680 probesets on the Eos/Affymetrix Hu03 Genechip array. Gene expression data for each probeset obtained from this analysis was expressed as average intensity (AI), a normalized value reflecting the relative level of mRNA expression.

WO 03/025138

PCT/US02/29560

Pkey: Unique Eos probeset identifier number  
 ExAccn: Exemplar Accession number, Genbank accession number  
 UnigenelD: Unigene number  
 Unigene Title: Unigene gene title  
 5 R1: 90th percentile of normal skin AIs divided by the average of benign nevi AIs  
 R2: 90th percentile of normal skin AIs divided by the average of benign nevi AIs, where the 15th percentile of normal tissue AIs was subtracted from both the numerator and denominator

TABLE 66A. DISEASE INDICATIONS AND PREFERRED UTILITIES FOR SELECTED GENES

Table 66A provides disease indications and preferred utilities for about 439 selected genes. These genes were identified using Eos/Affymetrix Genechip arrays.

|           |  |
|-----------|--|
| Primekey: | Unique Eos probeset identifier number  |
| ExAccn:   | Exemplar Accession number  |
| UgID:     | Unigene ID number  |
| UgTitle:  | Unigene title  |
| Disease:  | diseases indicated for selected gene as described in table 1 and abbreviated as follows: AWPC (androgen independent prostate diseases), arth (arthritic diseases), bph (benign prostatic hyperplasia), blad (bladder diseases), angio (blood vessel diseases), EWS (bone diseases), glio (brain diseases), breast (breast diseases), cerv (cervical diseases), colon (colorectal diseases), esoph (esophageal diseases), fibro (fibrotic diseases), headnk (head & neck diseases), lei (leiomyoma diseases), leuk (leukocyte diseases), hepC (liver diseases), lung (lung diseases), ovar (ovarian diseases), endo (ovarian endometrioid diseases), omuc (ovarian mucinous diseases), panc (pancreatic diseases), pros (prostate diseases), renal (renal diseases), mela (skin diseases), stom (stomach diseases), test (testicular diseases), uter (uterine diseases) |
| Utility:  | preferred utilities for selected gene as described in the text and abbreviated as follows: CTL (DNA vaccine target), diag (diagnostic or prognostic target), mAb (monoclonal antibody target), s.m. (small molecule target)  |

It is understood that the examples described above in no way serve to limit the true scope of this invention, but rather are presented for illustrative purposes. All publications, sequences of accession numbers, and patent applications cited in this specification are herein incorporated by reference as if each individual publication or patent application were specifically and individually indicated to be incorporated by reference.

WHAT IS CLAIMED IS:

- 1           1.       A method for determining the presence or absence of a pathological cell in a  
2     patient, said method comprising detecting a nucleic acid comprising a sequence at least 80%  
3     identical to a sequence as described in Tables 2A-68 in a biological sample from said patient,  
4     thereby determining the presence or absence of said pathological cell.
- 1           2.       The method of Claim 1, wherein:  
2           a) said pathology is described in Table 1, including a cancer; and/or  
3           b) said biological sample comprises isolated nucleic acids.
- 1           3.       The method of Claim 1, wherein said biological sample is tissue from an organ  
2     which is affected by said pathology of Table 1, including a cancer.
- 1           4.       The method of Claim 2, wherein said nucleic acids are mRNA
- 1           5.       The method of Claim 2:  
2           a) further comprising a step of amplifying nucleic acids before said step of detecting  
3                said nucleic acid; or  
4           b) where said detecting is of a protein encoded by said nucleic acid.
- 1           6.       The method of Claim 1, wherein said nucleic acid comprises a sequence as  
2     described in Tables 2A-68.
- 1           7.       The method of Claim 2, wherein:  
2           a) said detecting step is carried out by:  
3                i) using a labeled nucleic acid probe;  
4                ii) utilizing a biochip comprising a sequence at least 80% identical to a sequence  
5                as described in Tables 2A-68; or  
6                iii) detecting a polypeptide encoded by said nucleic acid; or  
7           b) said patient is:  
8                i) undergoing a therapeutic regimen to treat said pathology of Table 1; or  
9                ii) is suspected of having said pathology or cancer.
- 1           8.       An isolated nucleic acid molecule comprising a sequence as described in  
2     Tables 2A-68.

WO 03/025138

PCT/US02/29560

- 1           9.     The nucleic acid molecule of Claim 8, which is labeled.
- 1           10.    An expression vector comprising the nucleic acid of Claim 8.
- 1           11.    A host cell comprising the expression vector of Claim 10.
- 1           12.    An isolated polypeptide which is encoded by a nucleic acid molecule  
2 comprising a sequence as described in Tables 2A-68.
- 1           13.    An antibody that specifically binds a polypeptide of Claim 12.
- 1           14.    The antibody of Claim 13:  
2 a) conjugated to an effector component;  
3 b) conjugated to a detectable label, including a fluorescent label, a radioisotope, or a  
4 cytotoxic chemical;  
5 c) which is an antibody fragment; or  
6 d) which is a humanized antibody.
- 1           15.    A method for specifically targeting a compound to a pathological cell in a  
2 patient, said method comprising administering to said patient an antibody of Claim 13,  
3 thereby providing said targeting.
- 1           16.    A method for determining the presence or absence of a pathological cell in a  
2 patient, said method comprising contacting a biological sample with an antibody of Claim 13.
- 1           17.    The method of Claim 16, wherein:  
2 a) said antibody is conjugated to:  
3 i) an effector component; or  
4 ii) a fluorescent label; or  
5 b) said biological sample is a blood, serum, urine, or stool sample.
- 1           18.    A method for identifying a compound that modulates a pathology-associated  
2 polypeptide, said method comprising the steps of:

- 3       a) contacting said compound with a pathology-associated polypeptide, said  
4       polypeptide encoded by a polynucleotide that selectively hybridizes to a sequence  
5       at least 80% identical to a sequence as described in Tables 2A-68; and  
6       b) determining the functional effect of said compound upon said polypeptide.

1       19.     A drug screening assay comprising the steps of:

- 2       a) administering a test compound to a mammal having a pathology of Table 1 or a  
3       cell isolated therefrom; and  
4       b) comparing the level of gene expression of a polynucleotide that selectively  
5       hybridizes to a sequence at least 80% identical to a sequence as described in  
6       Tables 2A-68 in a treated cell or mammal with the level of gene expression of said  
7       polynucleotide in a control cell or mammal, wherein a test compound that  
8       modulates said level of expression of the polynucleotide is a candidate for the  
9       treatment of said pathology.
